

Converting DRM Protected Video and Music Files

DRM protected music and video can usually only be played for a short period of time before they timeout and then cannot be played at all, the best way to remove the DRM protection is to re-record them, most video converters can't play or convert these files but Aimersoft's Media Converter can do this with ease.

Here's a short tutorial to get you started.

You can only convert DRM protected video when they are still active, if they've timed out it's too late to convert them.

Download and install Aimersoft's Media Converter Here's http://www.moneyoffsoftware.com/aimersoft-media-converter-36-off-coupon_15969-60.html

Run Aimersoft Media Converter

Clicks add, and add the video file or drag and drop it onto the software.

Click the drop down tab and select the video format, you can keep this the same as the original format or change it to something else it's up to you, **MKV** format gives an excellent video quality.

Here's how to do a 1 to 1 copy

Click settings and change the following Video and Audio settings

Video

Zoom: keep original. If you get a black band down the left and right of the video then set to Full Screen.

Frame Rate: keep original format.

Resolution: keep original.

Bit Rate: set as high as possible, the higher the number the better the video quality.

Encoder: leave alone

Audio

Sample rate: 48000 Hz

Channels: it's up to you.

Bit rate: the higher the rate the better, an audio quality of 128 kbps is ok for video formats, but I would set this much higher for music formats.

Encoder: leave alone.

That's all the settings done click: OK.

You are now ready to do the conversion, you probably only want a sample at this point, that's no problem with Aimersoft Media Converter you can stop the conversion at any time to view the results. So click starts and let it run for 3 or 4% then click cancel.

To play the drm free video you just created click the find target button.

Converting Music formats is just as easy.

Aimersoft Media Converter is also preset for most portable media devices.
